

# CHR 2025

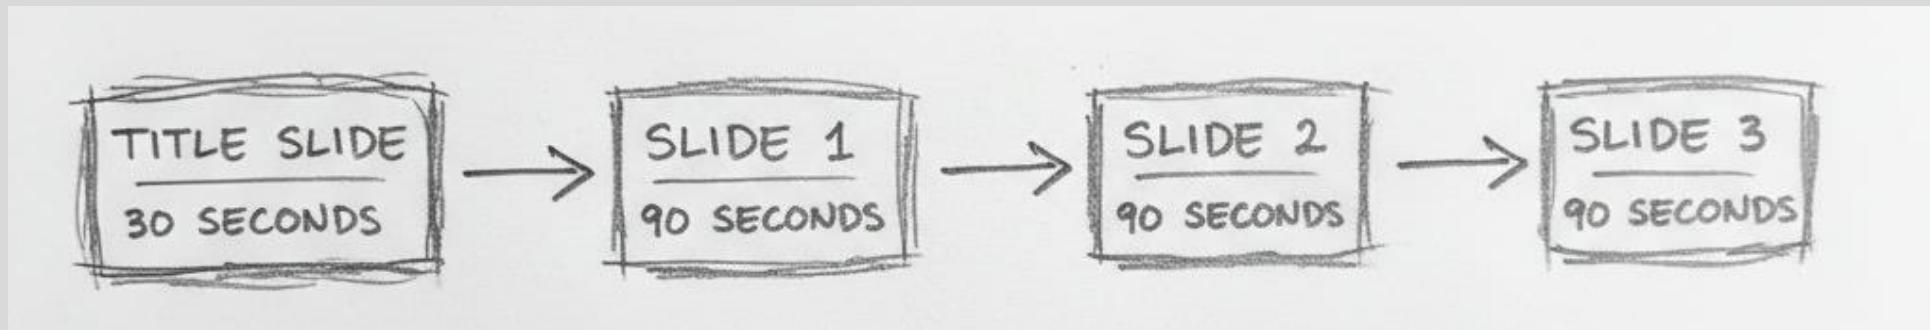

## Lightning Talks

Chair: Taylor Arnold

# Welcome!

While all forms of papers had increased submissions this year, the lightning talks had by far the largest growth and ultimately lowest acceptance rate.

We have a fantastic set of 17 presentations. To make sure everyone has time to present, we will use the following format with automatically advancing slides:

A static PDF version of these slides is available on the CHR 2025 website.

# **Bringing together close reading questions and distant reading methods in the analysis of archived web**

# Preliminary Solutions

The screenshot shows a web browser window titled "SOLRWAYBACK". The URL is [http://localhost:8080/solrwayback/search?query=\\*&groping=false&imgSearch=true](http://localhost:8080/solrwayback/search?query=*&groping=false&imgSearch=true). The page displays search results for the query "\*". The results are filtered by domain: kidlink.org, type: Web Page, and crawl\_year: 1996. The results list shows two entries, both from KIDLINK, Global Networking for Youth, 10-15, dated 28/12/1996, with URLs <http://kidlink.org:80/>. The first result has a score of 33.03534. Below the results, there is a section titled "Images: showing 3 out of 3" which displays three small images: a colorful "color" icon, a cartoonish "dinosaur" icon, and a "text" icon.

# **Einstein AI: Contextual Retrieval from the Collected Papers of Albert Einstein Using RAG and GraphRAG Architectures**

Florin-Stefan Morar

- *The Collected Papers of Albert Einstein* (CPAE), published by Princeton University Press. The definitive scholarly edition, established in 1977 and publishing since 1987.

- A massive ongoing project with over 30,000 unique documents total. Currently spans 17 volumes (up to 1930).

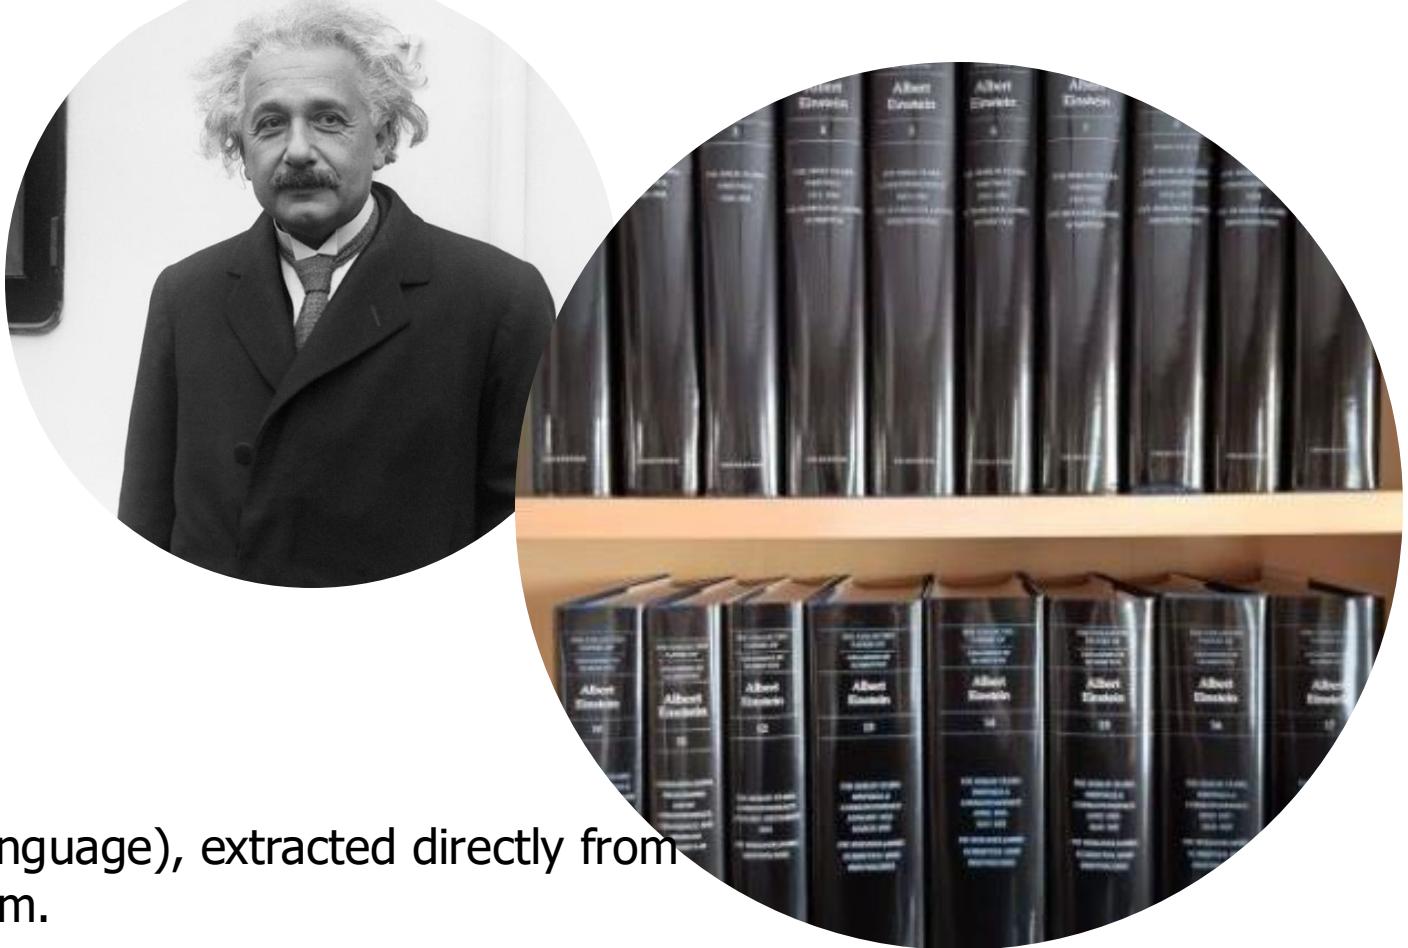

- Our dataset focuses on the “Early Berlin Years”, Includes *Annus Mirabilis* (1905), the completion of General Relativity (1915), and Einstein’s rise to fame (1919)

- Primary Text: The German Edition (original language), extracted directly from the open-access *Digital Einstein Papers* platform.

- Translations: English versions were integrated via custom OCR of the supplementary English volumes to ensure cross-lingual retrieval.

Research question comes from an effort to bridge history of science and LLMs

How did Einstein's personal life and social context lead to the development of his scientific ideas?

# Approach

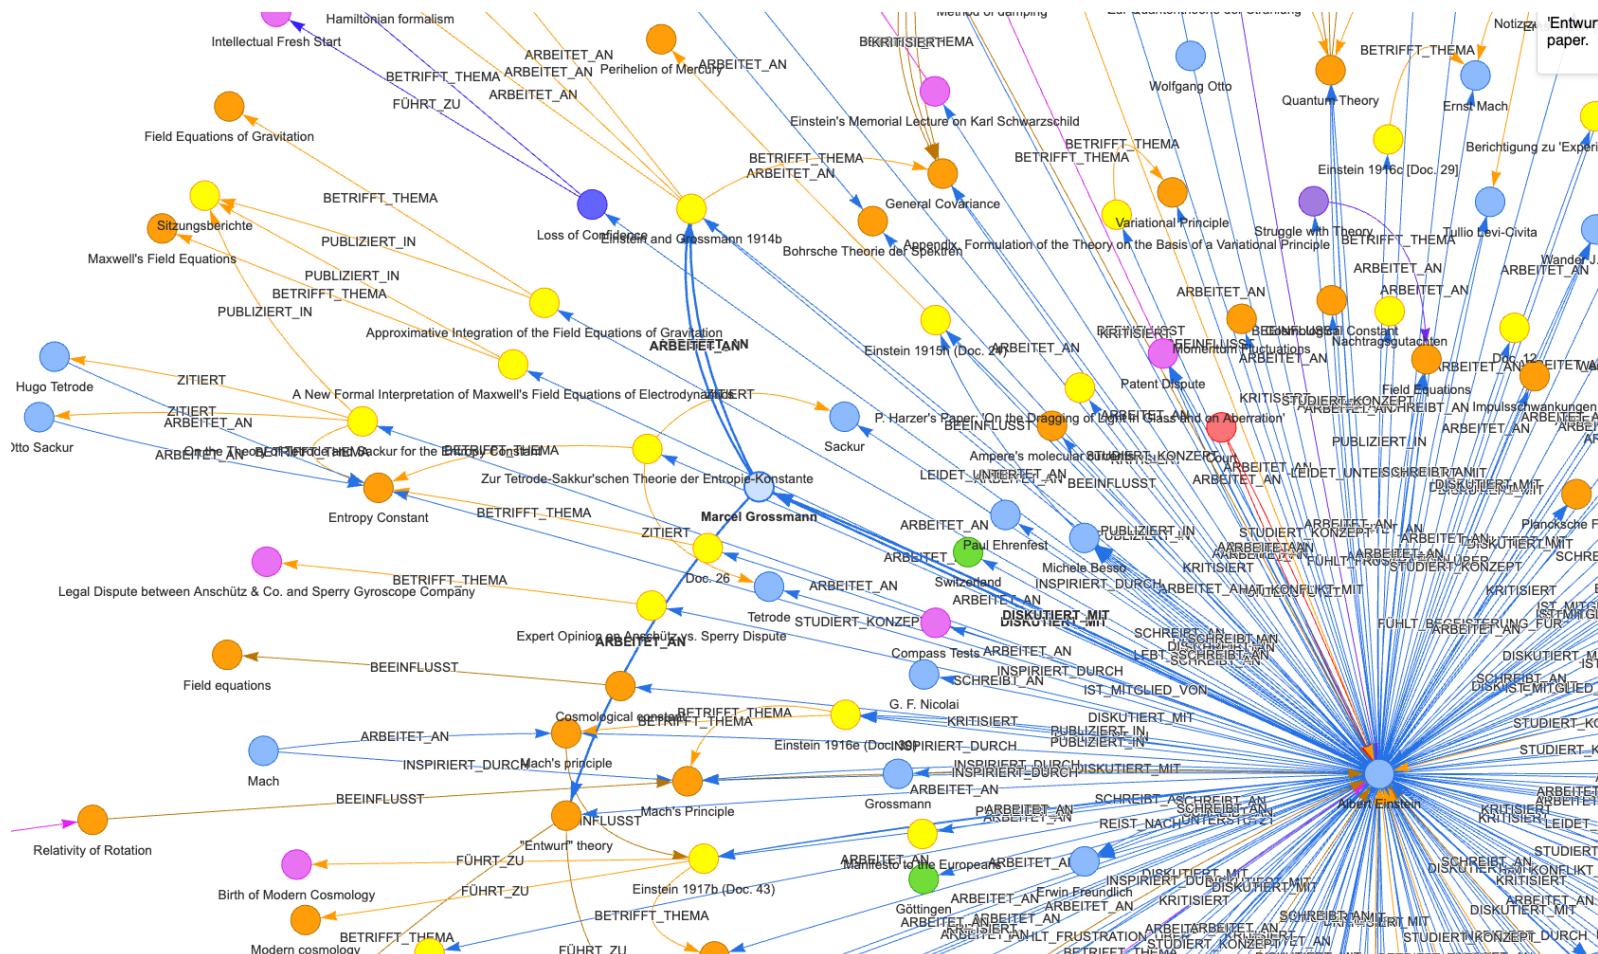

- A Custom Hybrid Pipeline for Historical Reasoning
- **Foundation:** Adapted the Microsoft GraphRAG architecture (specifically "Local Search" patterns) but re-engineered for the Google ecosystem. Replaced default extractors with Google Gemini 2.5 Pro to handle the complex, multilingual schema. Custom pipeline using NetworkX for graph management, FAISS for vector indexing, and SentenceTransformers (all-MiniLM-L6-v2) for embeddings.
- **Graph building schema:** A dual ontology, to simultaneously extract rigorous intellectual data (the "Science") and nuanced interpersonal dynamics. This allows us to map not just what Einstein discovered, but who he struggled with, what he felt about his work, and how his ideas evolved through social interaction. The Graph is built out of ENTITIES (person, organization, institution, location concept, method, theory) and RELATIONSHIPS (Interpersonal: colab with, wrote to etc.; Institutional: studied at etc.)
- Technical process: 1200 char chunking, Gemini 2.5 pro to extract entities using schema, NetworkX graph and stored as .pickle file for retrieval
- **How the Query Works (The "Graph-Aware" Retrieval):**
  - Vector Seeding: The user's query is embedded and matched against the vector index to find the top-k "Seed Nodes" (specific relevant document chunks).
  - Graph Expansion: The system uses the graph structure to "walk" from these seed nodes to their neighbors (1-2 hops).
    - *Result:* This retrieves semantically linked content (e.g., a letter *about* a concept) that lacks shared keywords, solving the "lexical gap."
  - Community Clustering: Retrieved nodes are clustered (using DBSCAN) to group thematically related evidence before the LLM synthesizes the final answer.

```
+ENTITY TYPES (Use these categories)+
+<PERSON> Key individuals (e.g., Albert Einstein, Mileva Maric, Marcel Grossmann)
+<ORGANIZATION> Schools, workplaces, organizations (e.g., ETH Zurich, Swiss Patent Office, University of Zurich)
+<INSTITUTION> Similar to organization but for formal institutions (e.g., Kaiser Wilhelm Institute)
+<LOCATION> Specific locations (e.g., Berlin, Bern, Princeton, Ann Arbor, Kyoto, Annalen der Physik)
+<THEORY> Specific theories (e.g., Special Relativity, General Relativity, Quantum Theory)
+<METHOD> Scientific concepts and ideas (e.g., spacetime, photoelectric effect, quantum mechanics, Aether)
+<EXPERIMENT> Mathematical experimental methods (e.g., tensor calculus, thought experiments)
+<PUBLICATION> Scientific papers (e.g., "On the Electrodynamics of Moving Bodies")
+<EXPERIMENT> Scientific experiments (e.g., Michelson-Morley experiment)
+<DATE> Specific dates or time periods (e.g., 1905, March 14, 1879)
+<FAMILY_MEMBER> Family relationships (e.g., Hans Albert Einstein, Elsa Einstein)
+<BOOK> Published books (e.g., "The Meaning of Relativity")
+<LETTER> Correspondence (e.g., "Letter to Mileva Maric, 1905")
+<EDITION> Editions (e.g., "Relativity: The Special and General Theory")
+<AWARD> Academic awards (e.g., Physics, Mathematics)
+<SCIENTIFIC_DISCOVERY> Discoveries (e.g., Brownian motion, E=mc²)
+<THEME> Abstract themes (e.g., FinancialStruggle, JobSearch, Antisemitism, ScientificCollaboration)
+<EMOTION> Emotional states expressed (e.g., Frustration, Zoversichtlich, Einsam) - use sparingly, only when explicitly stated
```

```
+RELATIONSHIP TYPES (Use English or German as appropriate)++
+<INTERPERSONAL>
- collaborated_with, discussed_with, wrote_to, has_conflict_with, supports, loves, misses, meets
- DISPUTED_MHT, SCHREIBT_AN, HAT_KONFLIKT_MHT, UNTERSTUTZT, LIEST, VERMISST, TREFFT
+<INSTITUTIONAL>
- ESTABLISHED_BY, IS_MEMBER_OF, taught_at, lectured_at
- STUDIED_AT, AMBETET_WB, IST_MITGLIED_WB
+<INTELLECTUAL>
- influenced_by, authored_by, proposed_by, criticizes, inspired_by, studies_concept, works_on, published_in, cites
- KRÄFTIGT, INSPIRIERT_DURCH, STUDIERT_KONZEPT, AMBETET_WB, PUBLIZIERT_BY, ZITIERT
+<SPATIAL>
- LOCATED_IN, LIVES_IN, TRAVELS_TO

# **Modeling Intertextuality: An Ontological Framework for Literary Studies**

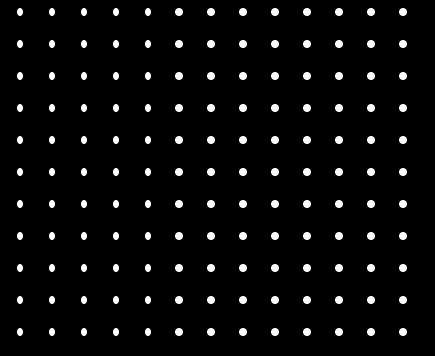

Laura Untner

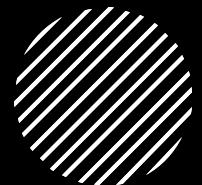

Intertextuality is  
messy, but we  
need structure.

Some ontologies already provide this structure:

- ... mainly for scholarly publishing (BIBO, CiTO, etc.)
- ... or for specific corpora or projects (SAWS,  
Hypermedia Dante, OntoPoetry, GOLEM,  
MiMoText, etc.)

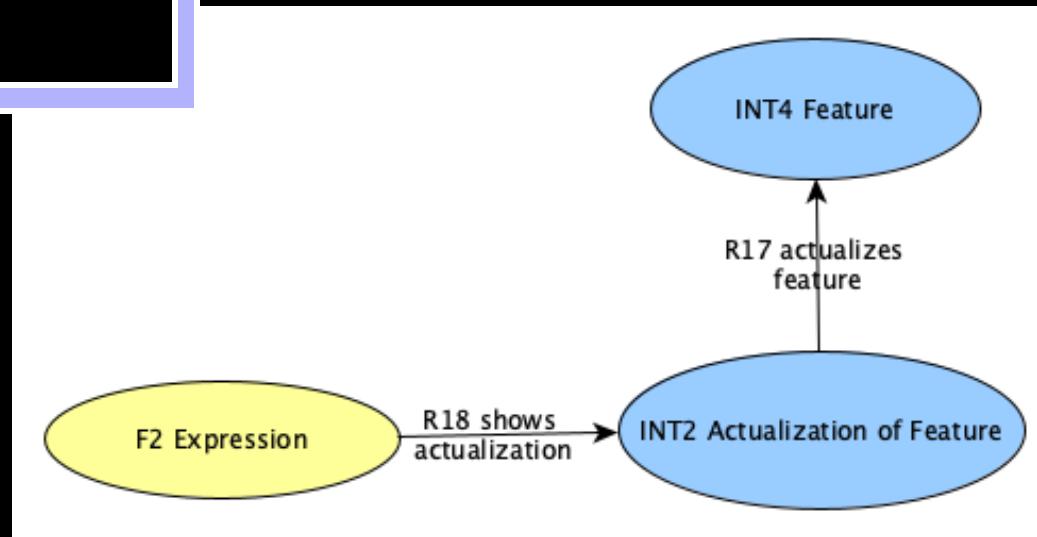

# INTRO: The Intertextual, Interpictorial, and Intermedial Relations Ontology

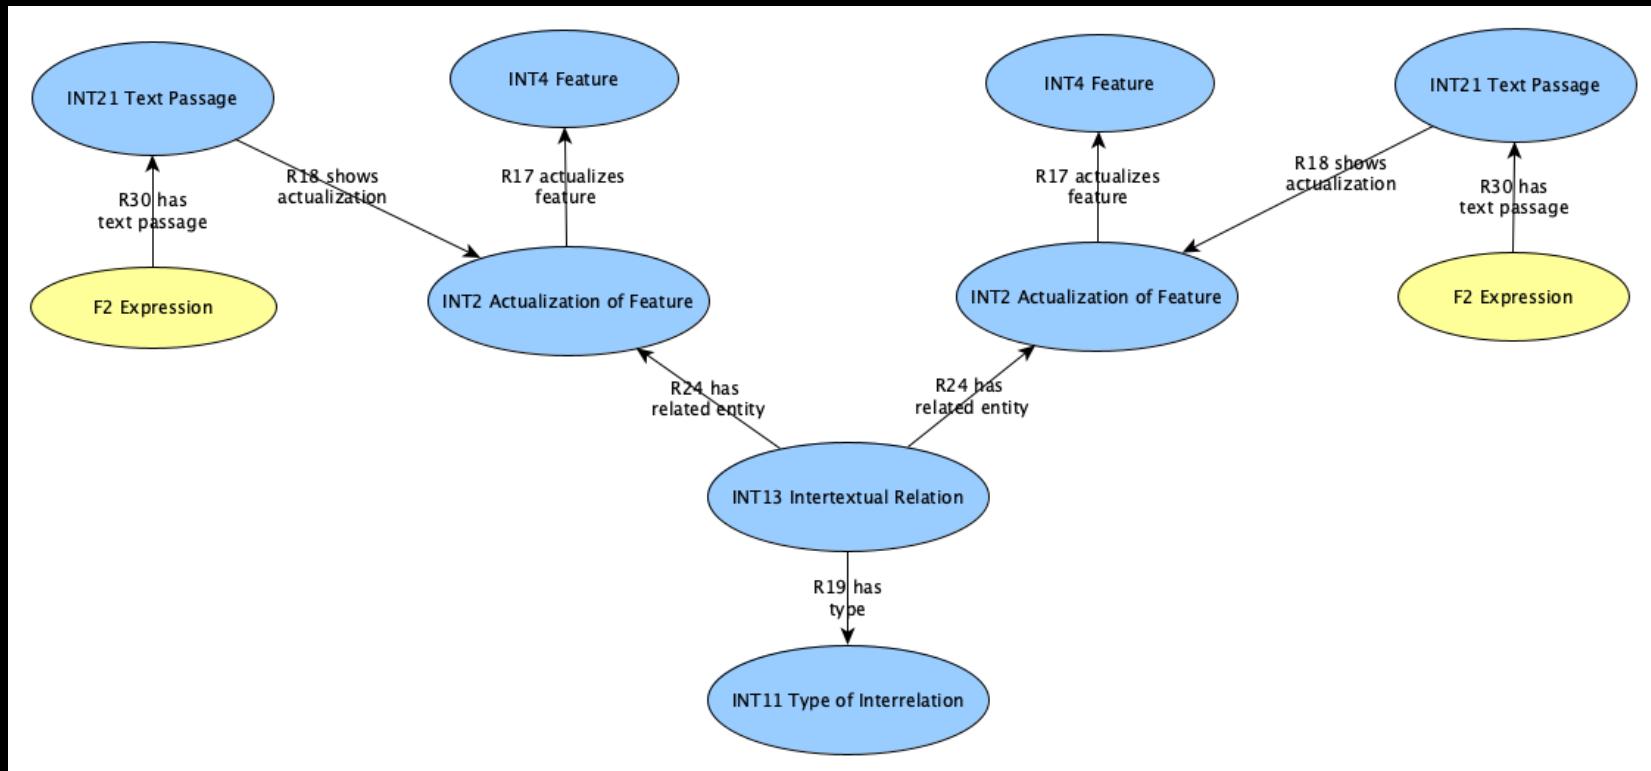

... was originally developed by Bernhard Oberreither.

... is built on CIDOC CRM and LRMO.

... is text-centric.

>> <https://boberreither.github.io/INTRO/> <<

# **Measuring the Synchronicity of Historical European Parliamentary Discourse, 1949-2018**

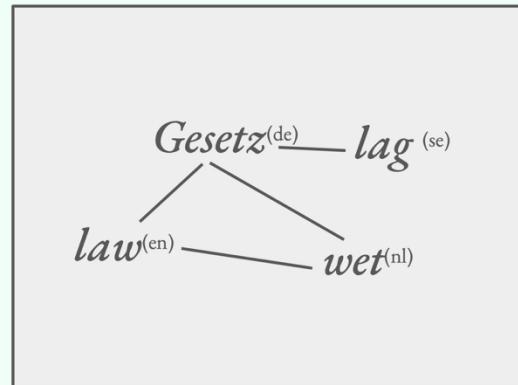

Ruben Ros and Risto Turunen

# How did *British*, *Dutch*, *Swedish*, and *German* parliamentary discourse develop between 1945 and 2018?

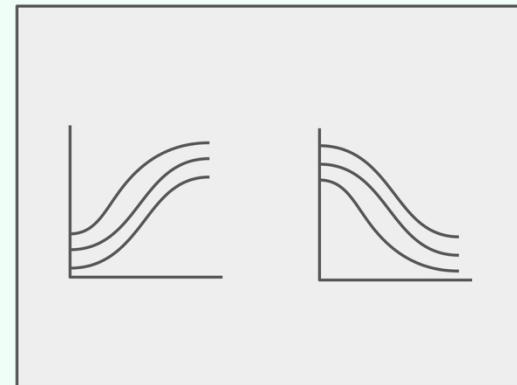

Find bilingual word pairs with high correlation in frequency time series.

Spearman correlation coefficient + Dynamic Time Warping

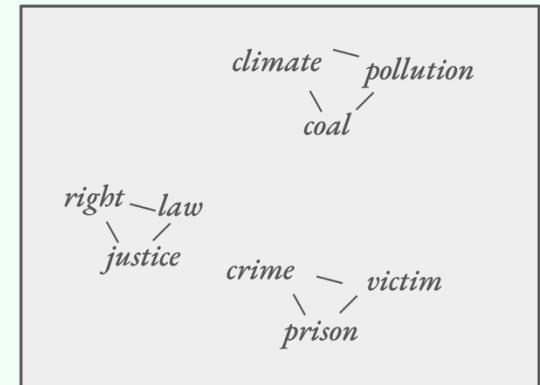

Filter concepts:  
multilingual networks of words with high internal frequency correlation.

Contextual translation + word alignment = distributions of translations

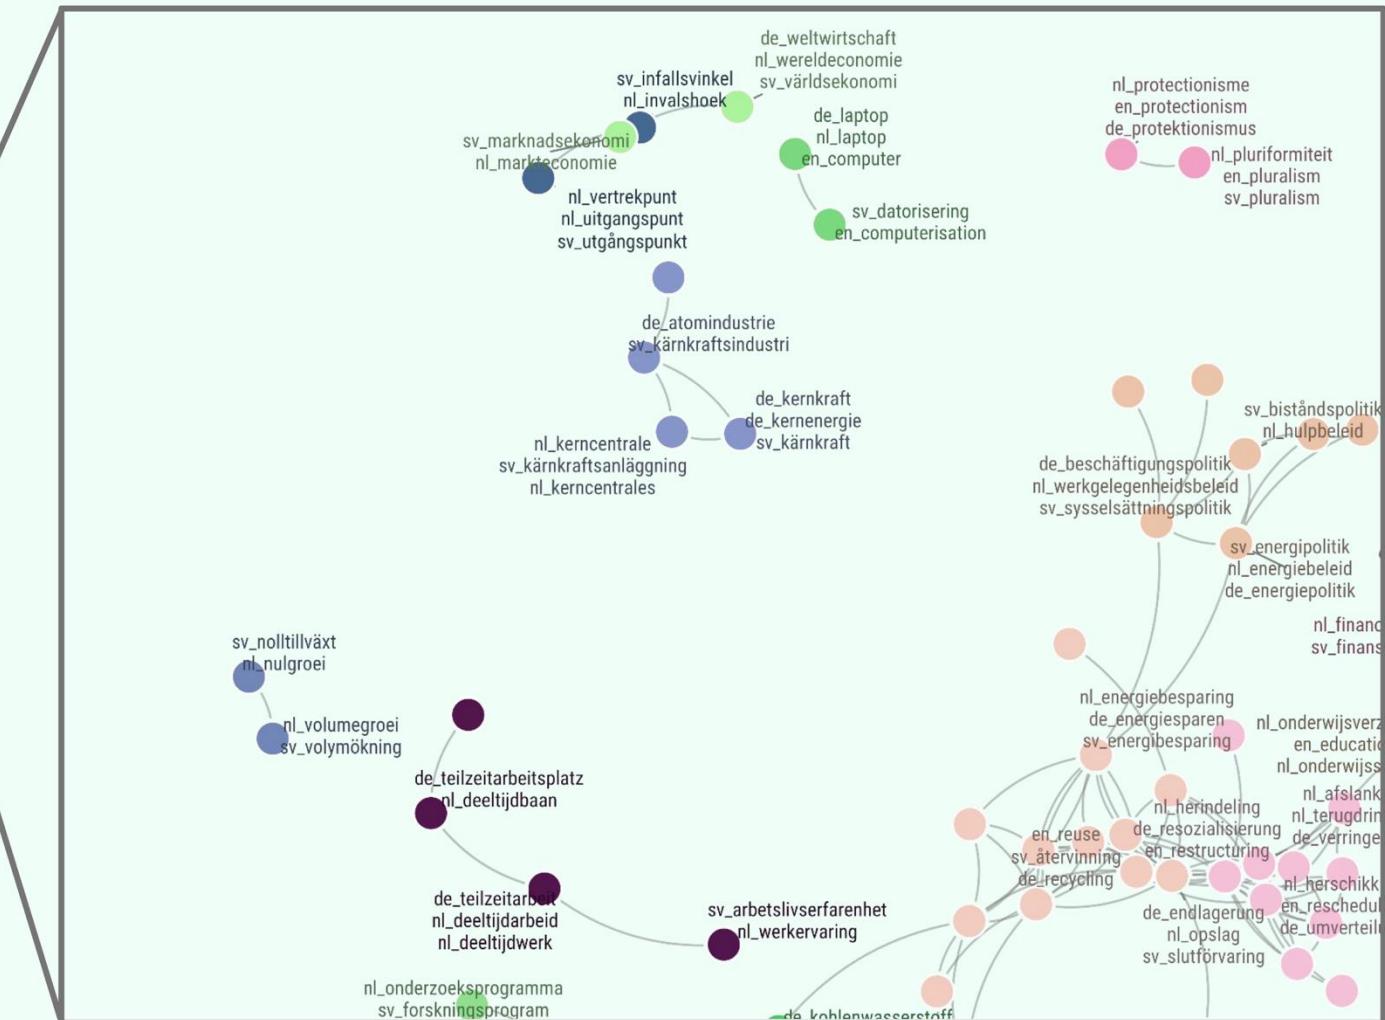

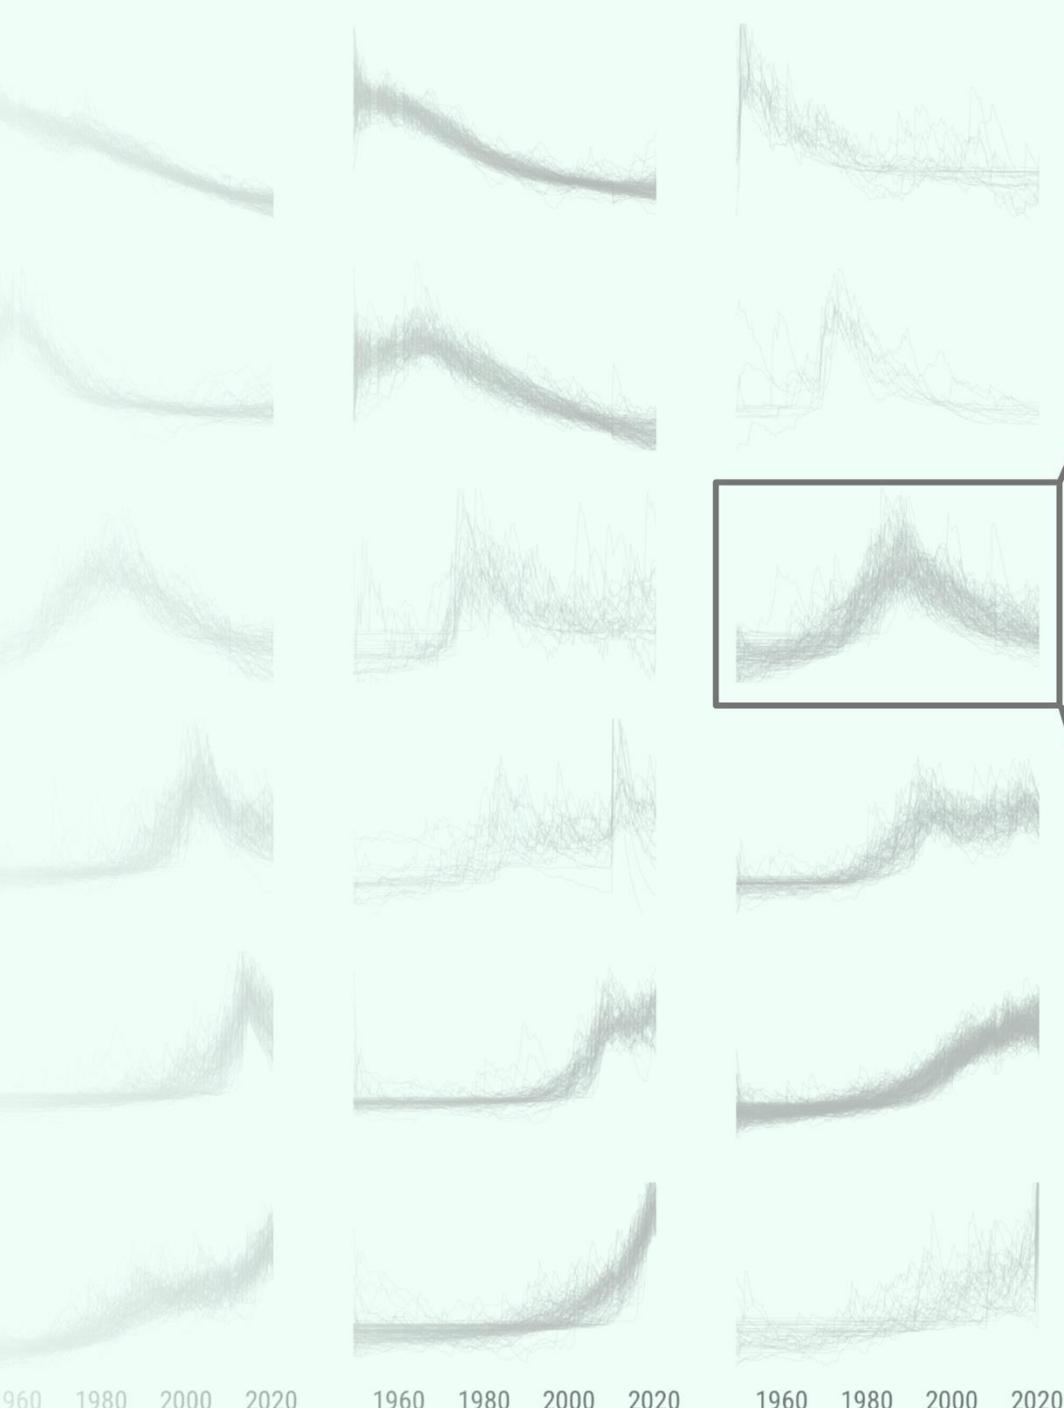

Cluster averaged concept frequency time-series

K-means clustering with normalized time series.

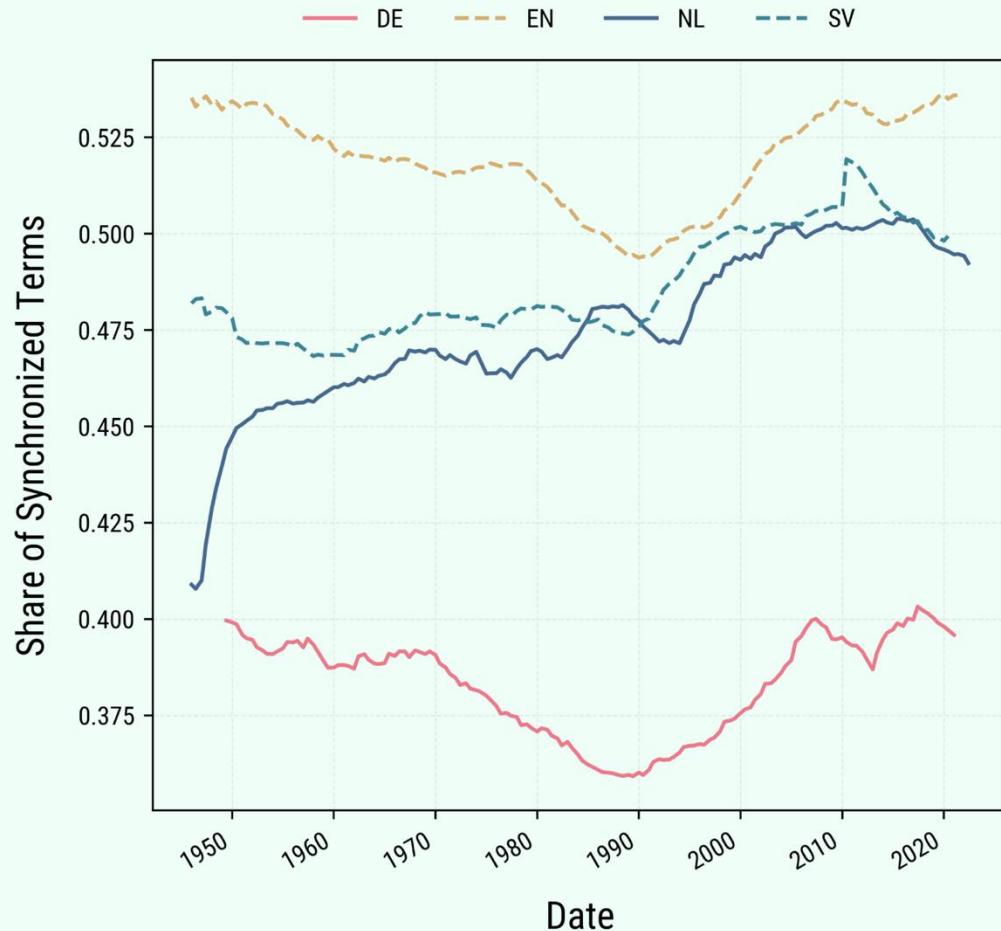

Find semantic clusters within time-series clusters

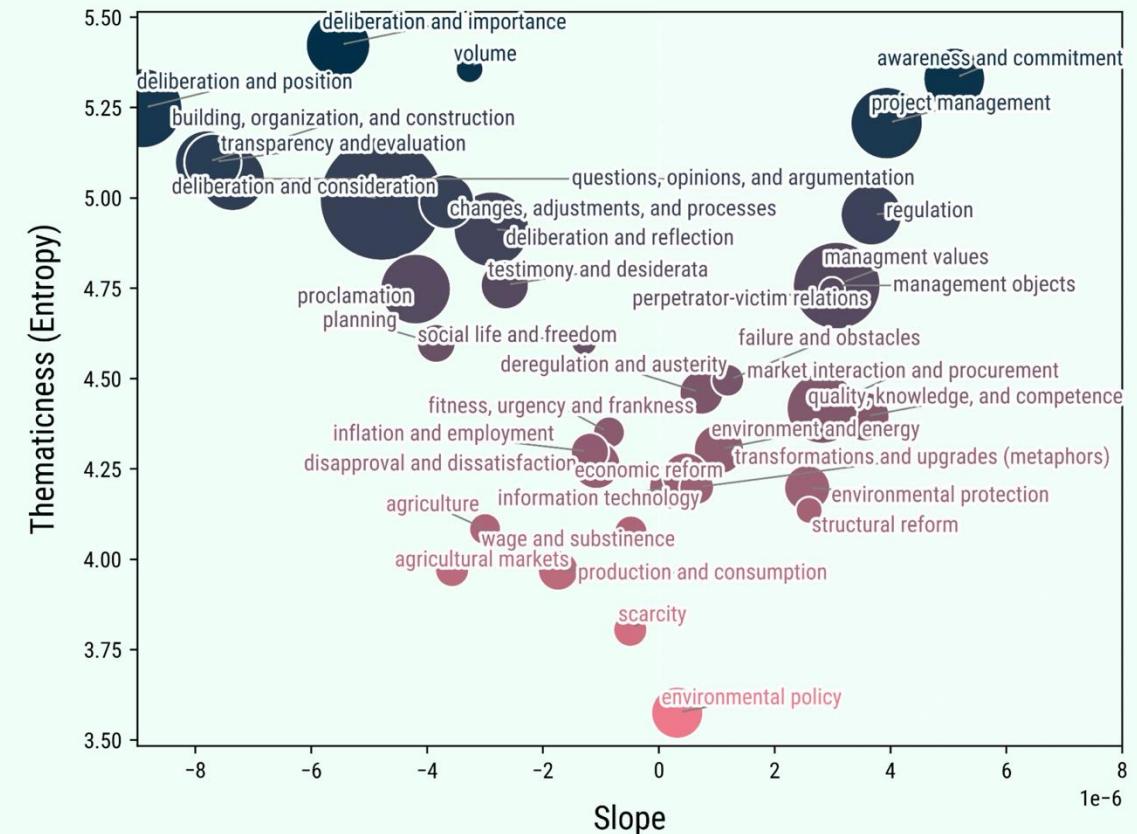

Type embeddings from adapted multilingual bert-base

Identifying semantic clusters within temporal clusters.

The **share of synchronized terms** increases in all countries, especially from the 1990s onwards.

The slope and entropy of clusters reveals shared trends in both **procedural style** and **thematic content**

# **Disorder or (self-)murder? Making sense of suicide in 19th-century British newspapers**

Nilo Pedrazzini and Daniel C. S. Wilson

# Disorder OR (self-)murder?

Making sense of suicide in 19th-century British newspapers

Nilo Pedrazzini (The Alan Turing Institute, UK)  
Daniel CS Wilson (University College London, UK)

UNPRECEDENTED CASE.—*Mary Murgetts*, an interesting young woman, was indicted for throwing herself into the river, with intent to commit *felo de se*. The prisoner pleaded guilty. The COMMON SERGEANT told the prisoner that her offence was one forbidden in the decalogue, and by the common law of England declared to be a felony. He (the Common Sergeant) had been informed that down to the present time she entertained a determination to destroy herself; hence, the best thing the Court could do would be to respite her judgment until the next sessions, and he hoped ere that time the chaplain of the gaol would be able to impress upon her mind the sin and folly of self-destruction.

The session terminated on Thursday last, the 21st instant, at 12 o'clock.

1843  
sin and folly

23 YEARS OF SUFFERING  
CLAYTON WOMAN HANGS HERSELF.  
A MERCIFUL VIEW.  
  
After suffering from rheumatism for the long period of 23 years, Margaret Heys (55), a single woman, who resided with her niece at 19, Blackburn-road, Clayton-le-Moors, put an end to her sufferings on Monday afternoon by hanging herself. Owing to the rheumatism deceased was infirm, and she attended to the house whilst her niece went to the mill. She was all right at noon on Monday, but when a next door neighbour tried the door of the house during the afternoon she found it locked. About five o'clock she suspected that something untoward had happened, and she called deceased's nephew, who, on entering the house, found his aunt hanging by a rope in the front room. The body was immediately cut down and medical aid summoned, but

## Migration to Demiivka from Beyond Kyiv Gubernia (male + female)

# **Speculative Reconstruction and the Ethics of the Fragment: Early Experiments with Generative AI in Art History**

Katarina Mohar

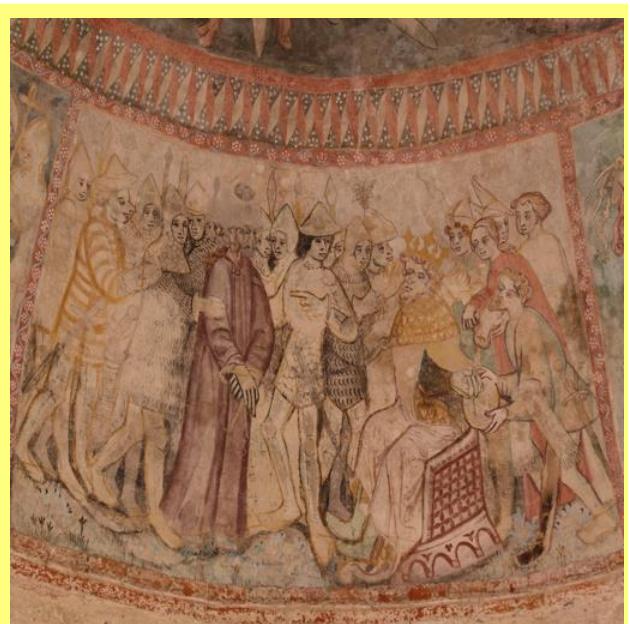

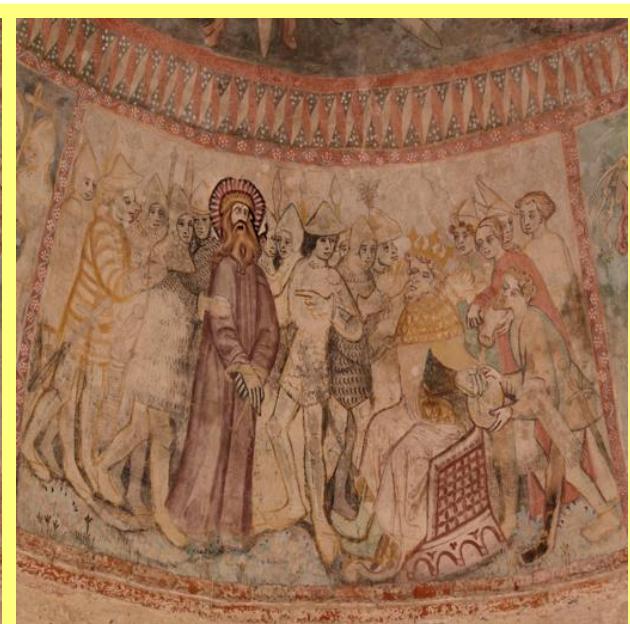

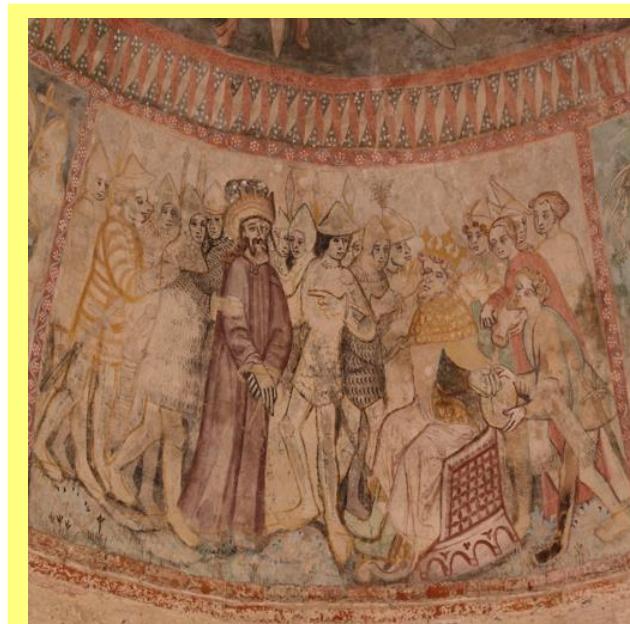

# Fragments, AI, and Speculative Reconstruction

- Generative AI used to explore **visual hypotheses**, not restorations
- Two micro-datasets: **Selo fresco fragments** and **four paintings by Almenak**
- Early Selo tests exposed the **base model's generic “medievalness”**
- Reveals a core issue: AI fills **absence** with the *probable*, not the *historically specific*

original, Selo

DreamBooth inpainting tests

# What AI Learns — and What It Doesn’t

- Fine-tuning captured **surface style** from minimal data
- But models struggled with **composition** and **narrative coherence**
- Outputs work as **multiple speculative possibilities**, not reconstructions
- Key insight: AI exposes the **range of interpretations** a fragment can support

Almenak: *The Peddler*

LoRa tests

(late 17th century, oil/canvas,  
National Gallery of Slovenia)

Prompt: An elderly peddler showing trinkets to a peasant woman outside a cottage, depicted in the style of a 17th-century oil painting, with expressive gestures, ochre tones, and soft painterly edge in style of almnk

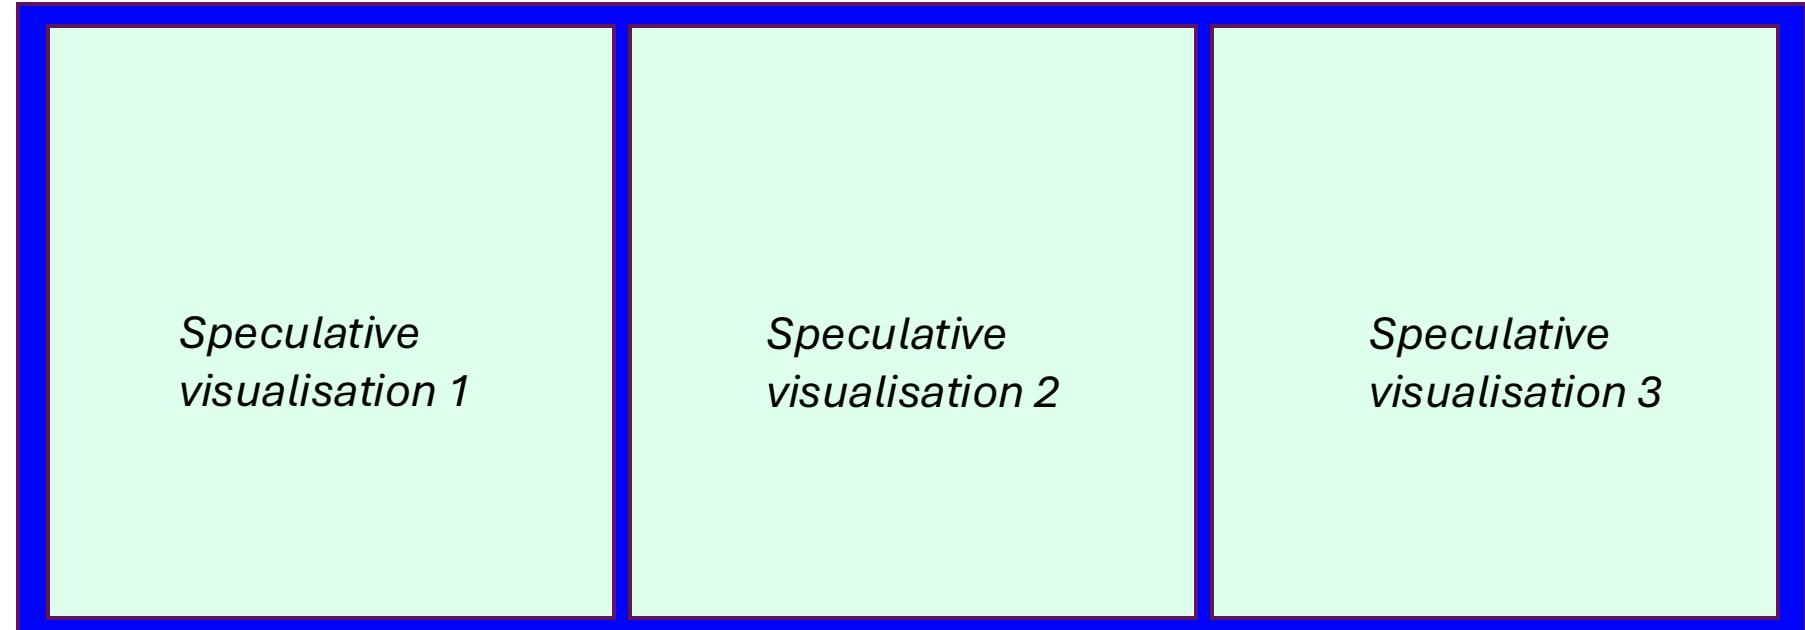

# The Ethics of Completing Fragments

- Fragments carry meaning through **incompleteness**
- AI “completions” risk producing **false wholeness** or stylistic flattening
- Our guidelines for responsible use:
  - Label AI outputs as **speculative visualizations**
  - Always show them **alongside the fragment**
  - Present **multiple options**, never a single authoritative fill
- Aim: use AI to **clarify absence**, not erase it

original, Selo

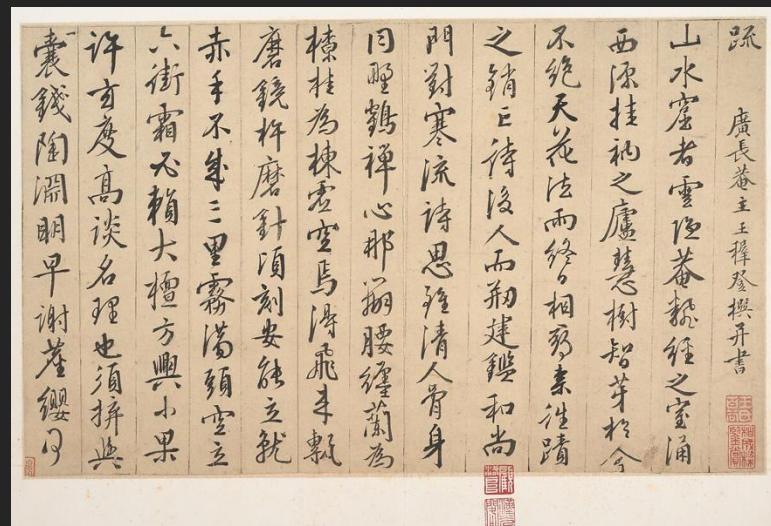

Hypothetical AI-generated fill

# **When Larger LLMs Aren't Enough: Word Segmentation in Historical Chinese Texts**

Hao Tan

- “Word Segmentation” - What is the Problem Here?

“removespacesbetweens  
entencesthisisasentencet  
hisisanothersentence”

“東京大学院生”

“東京大学 + 院生”  
A graduate student at  
the University of Tokyo

“東京 + 大学院生”  
A graduate student  
in Tokyo

- Why LLMs Aren't Enough for This Problem?

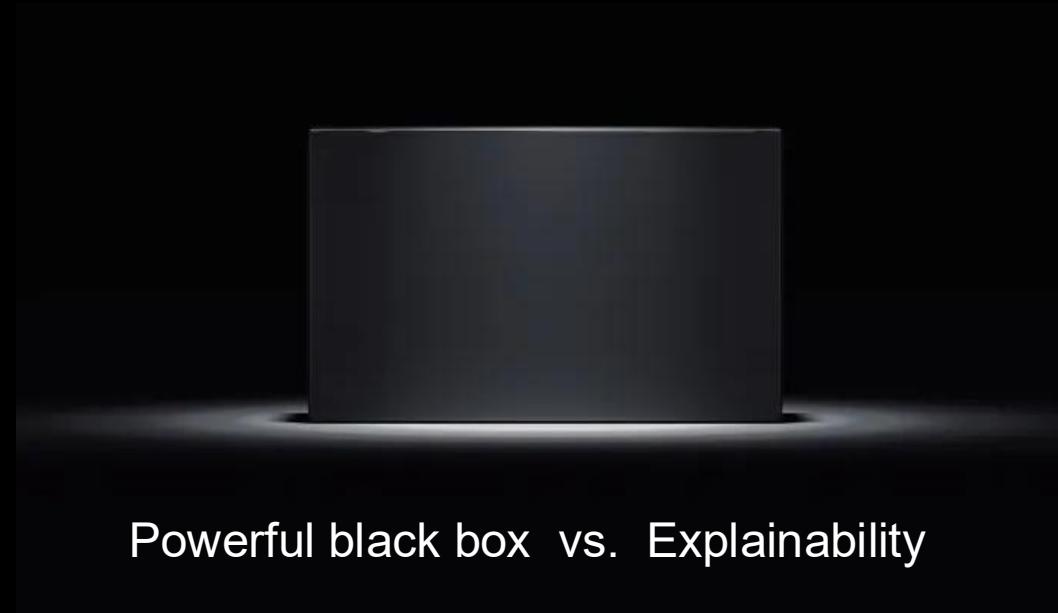

-- Language evolves: “One Size Doesn’t Fit All Eras”

‘yellow’      ‘river’      ‘enter’      ‘sea’      ‘mouth’  
黃                  河                  入                  海                  口

Modern Chinese	the Yellow River		estuary		
Medieval Chinese	黃	河	入	海	口
Ancient Chinese	yellow	river	enter	sea	mouth
	黃	河	入	海	口

- **LLMs in Humanities:**  
**“What are the Hidden Assumptions Here?”**

Digital humanities ←→ Interpretive scholarship

Powerful black box vs. Explainability

# Towards animal-centric affective analysis in poetry

Thomas Haider

# Framework for Affective Analysis of Animals

Animals in NH German Poetry:  
over 20k mentions (in 65k poems)

TAXON	Frequency	TAXON	Frequency	TAXON	Frequency
Nachtigall	1036	Hund	822	Adler	776
Pferd	653	Esel	521	Vieh	493
Wurm	462	Lamm	406	Hahn	378
Fisch	339	Schlangen	338	Bienen	333
Raben	315	Schlange	314	Tauben	308
Fuchs	299	Löwen	293	Hirsch	291
Brut	286	Wolf	265	Löwe	264
Taube	263	Reh	251	Schwan	250
Drachen	249	Schmetterling	236	Schimmel	233
Grillen	224	Aar	211	Schafe	208
Ungeheuer	198	Schwalbe	195	Kukuk	186
Kuh	184	Schaf	175	Bär	173

**Table 1:** Most frequent animal taxa in German poetry corpus.

Dimensions of Interest:

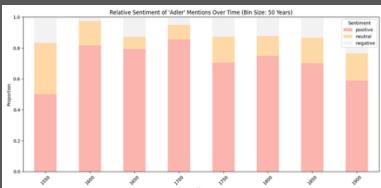

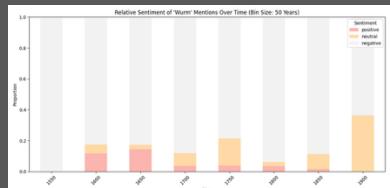

- Diegetic Function
- Agency
- Power
- Target Sentiment
- Representation/Connotation

# Target Sentiment Classification (of Animals)

- LLMs in zero shot -> .7 F1 macro
- Few shot hurt
- Animal name as generic ‘Tier’ -> minus 7 points (sentiment encoded in symbol only)

Metric / Class	Qwen3	Mistral7B	DeepSeekV3	LLaMA3.3
Macro F1	0.659	0.337	0.692	0.696
Negative F1	0.797	0.226	0.762	0.778
Neutral F1	0.415	0.444	0.573	0.573
Positive F1	0.767	0.340	0.742	0.736
Negative Precision	0.724	0.875	0.752	0.690
Neutral Precision	0.595	0.292	0.526	0.623
Positive Precision	0.737	0.735	0.814	0.812
Negative Recall	0.885	0.130	0.773	0.891
Neutral Recall	0.319	0.924	0.630	0.531
Positive Recall	0.798	0.221	0.681	0.672

Table 2: Comparison of Model Performance on Target Sentiment Task

Eagle

- Why is an animal evaluated a certain way?
- Prompt DeepSeekV3 to interpret ‘meaning’ of animal in context -> connotation labels (representation)
- Calc. association measures sentiment & connotation
- Counterintuitive connotation -> non-canonical?

Top Keywords for Sentiment: POSITIVE (Adler)						
	keyword	observed	expected	pmi	z_score	fisher_p
2	strength	351	302.76	0.2133	2.8888	0.0
3	transcendence	160	130.4	0.2952	2.6376	0.0
5	vision	40	29.98	0.4162	1.838	9e-06
15	victory	37	28.48	0.3777	1.603	0.000229
23	divine	60	49.46	0.2787	1.5083	0.000891

Top Keywords for Sentiment: NEGATIVE (Adler)						
	keyword	observed	expected	pmi	z_score	fisher_p
0	vulnerability	21	3.18	2.7236	10.0219	0.0
1	destruction	10	1.48	2.7601	7.0247	0.0
4	retreat	7	1.02	2.7761	5.9188	7e-06
6	suffering	5	0.57	3.1386	5.8852	1.9e-05
7	predator	7	1.14	2.6241	5.509	2.1e-05

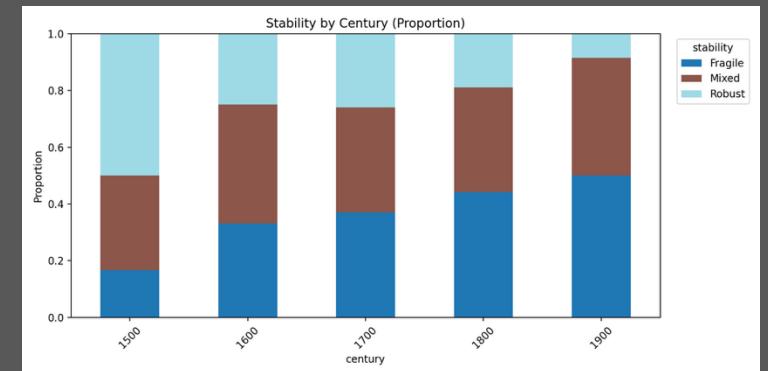

Worm

# How do we evaluate connotation/representation?

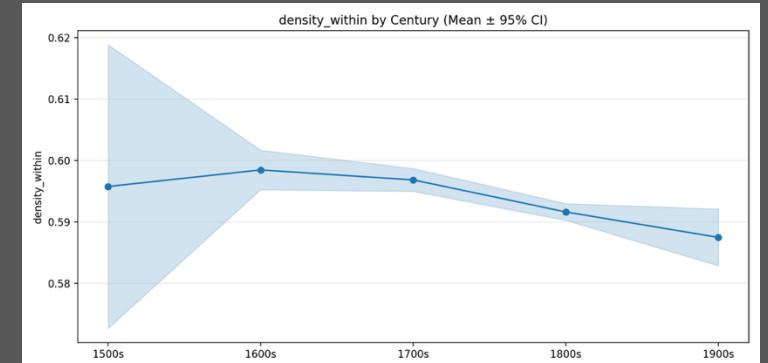

- Which meaning comes from from the symbol (animal name), the context, what's encoded in the model?
- What does a reader need to know about the symbol (to understand the poem)?
- What's the signal in the context?
- Create synthetic ground truth?
- Context stays constant -> Inject various Animals
- -> DeepSeek 'interprets'

- Here stood once a **cow** and thought
- Here stood once a **dragon** and thought
  - contemplation; simplicity; existence; reflection; ordinary
  - mythical; transience; memory; decay; contemplation

Jaccard coef.  
Keyword overlap  
(thresholded) ->  
context matters  
less and less

Topic diversity  
increases (more  
contexts)  
(density ↓ )

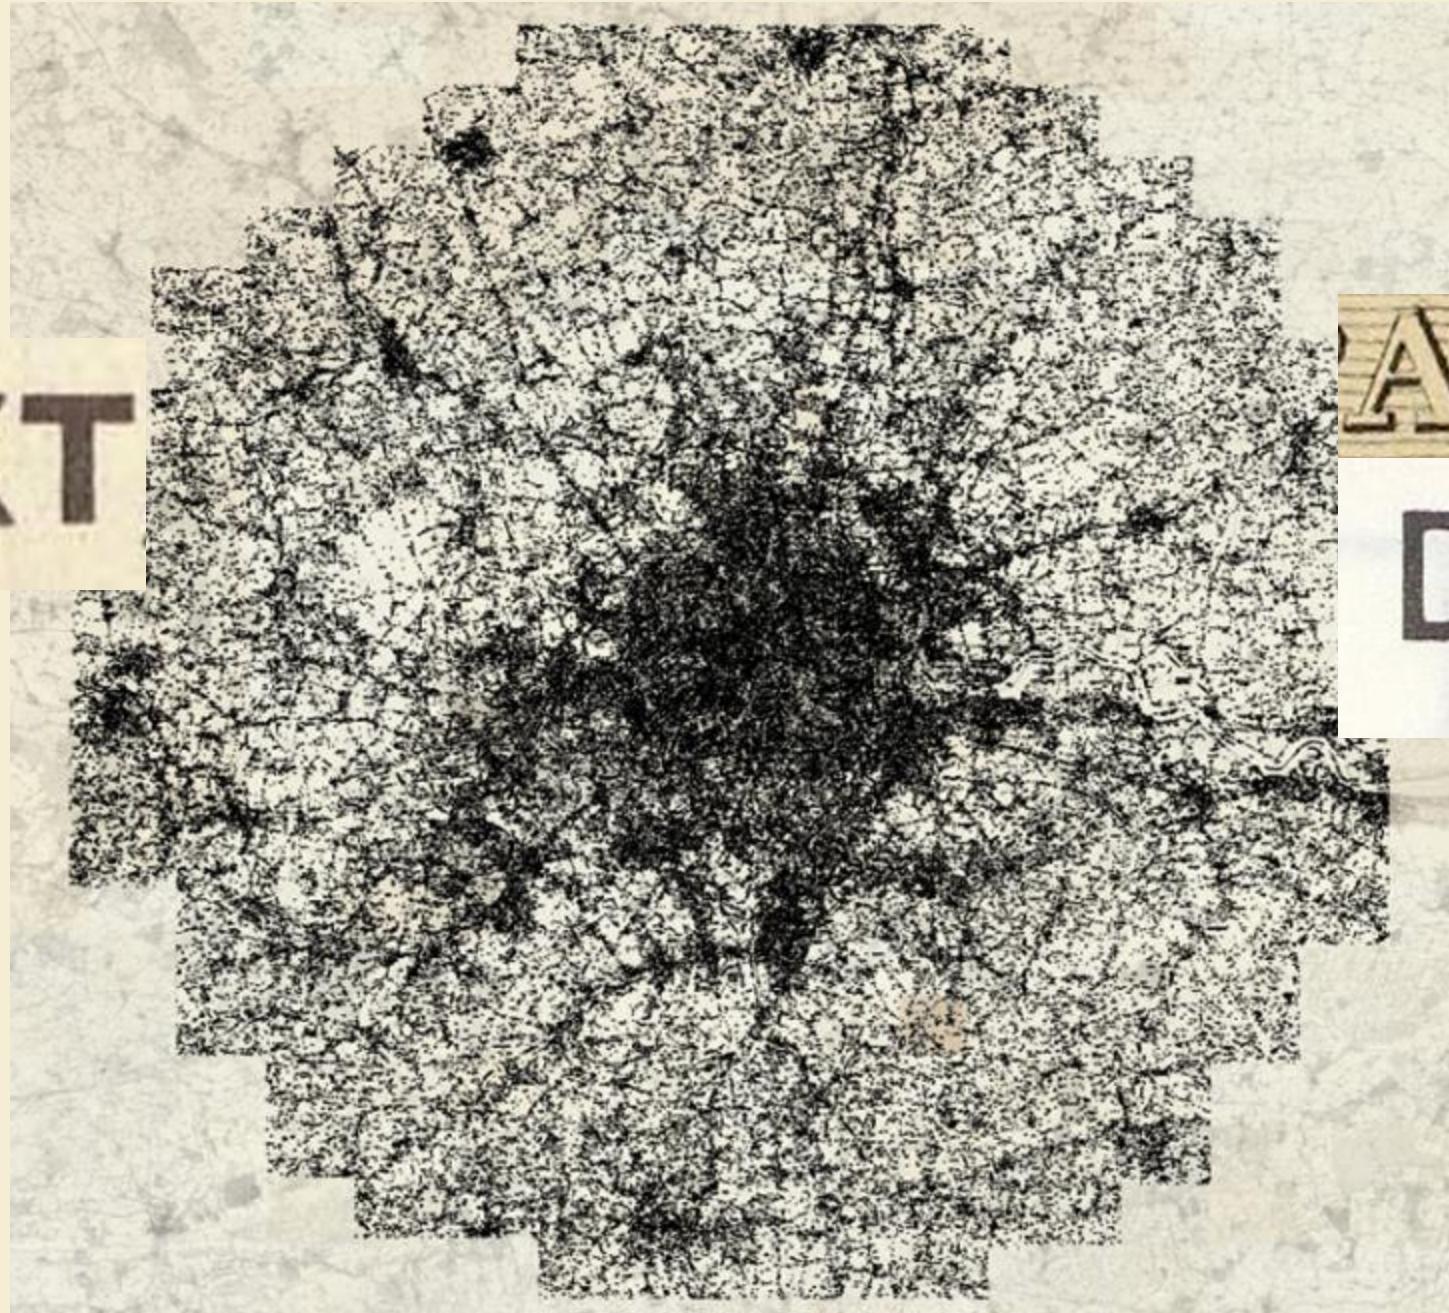

# **Neighbourhood Walks: A New Semantic Topology for Historical Map Text**

Katherine McDonough, Kaspar Beelen and Daniel C. S. Wilson

MAP

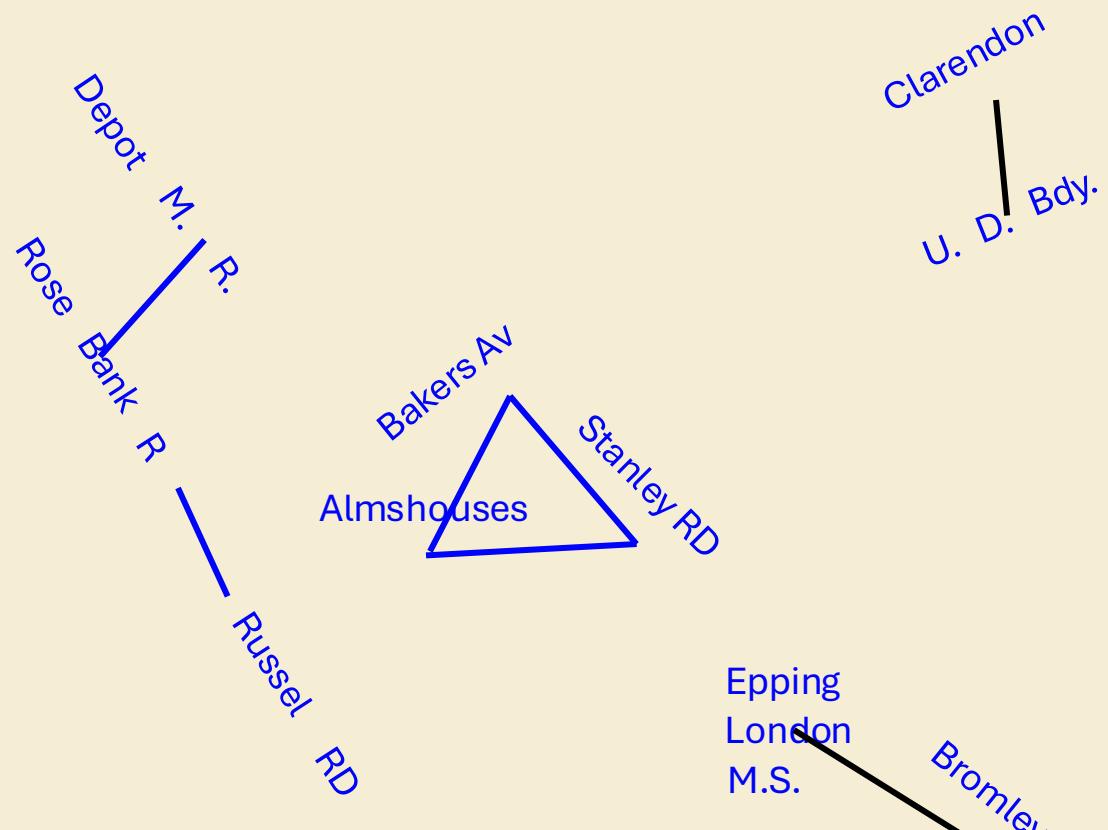

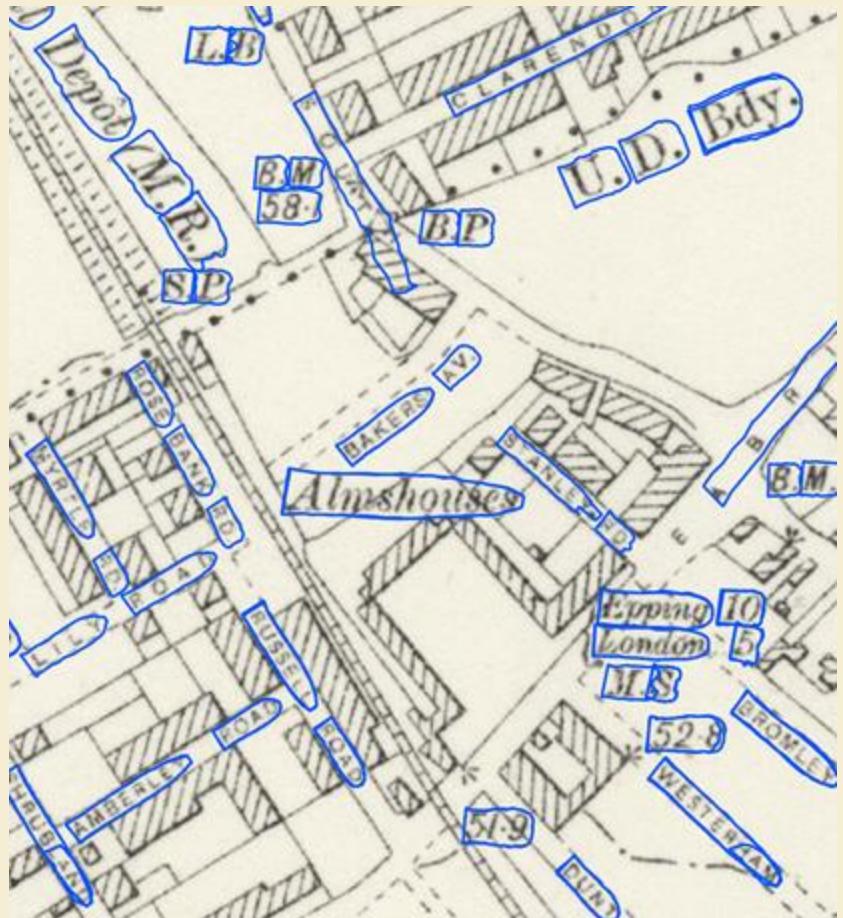

TEXT

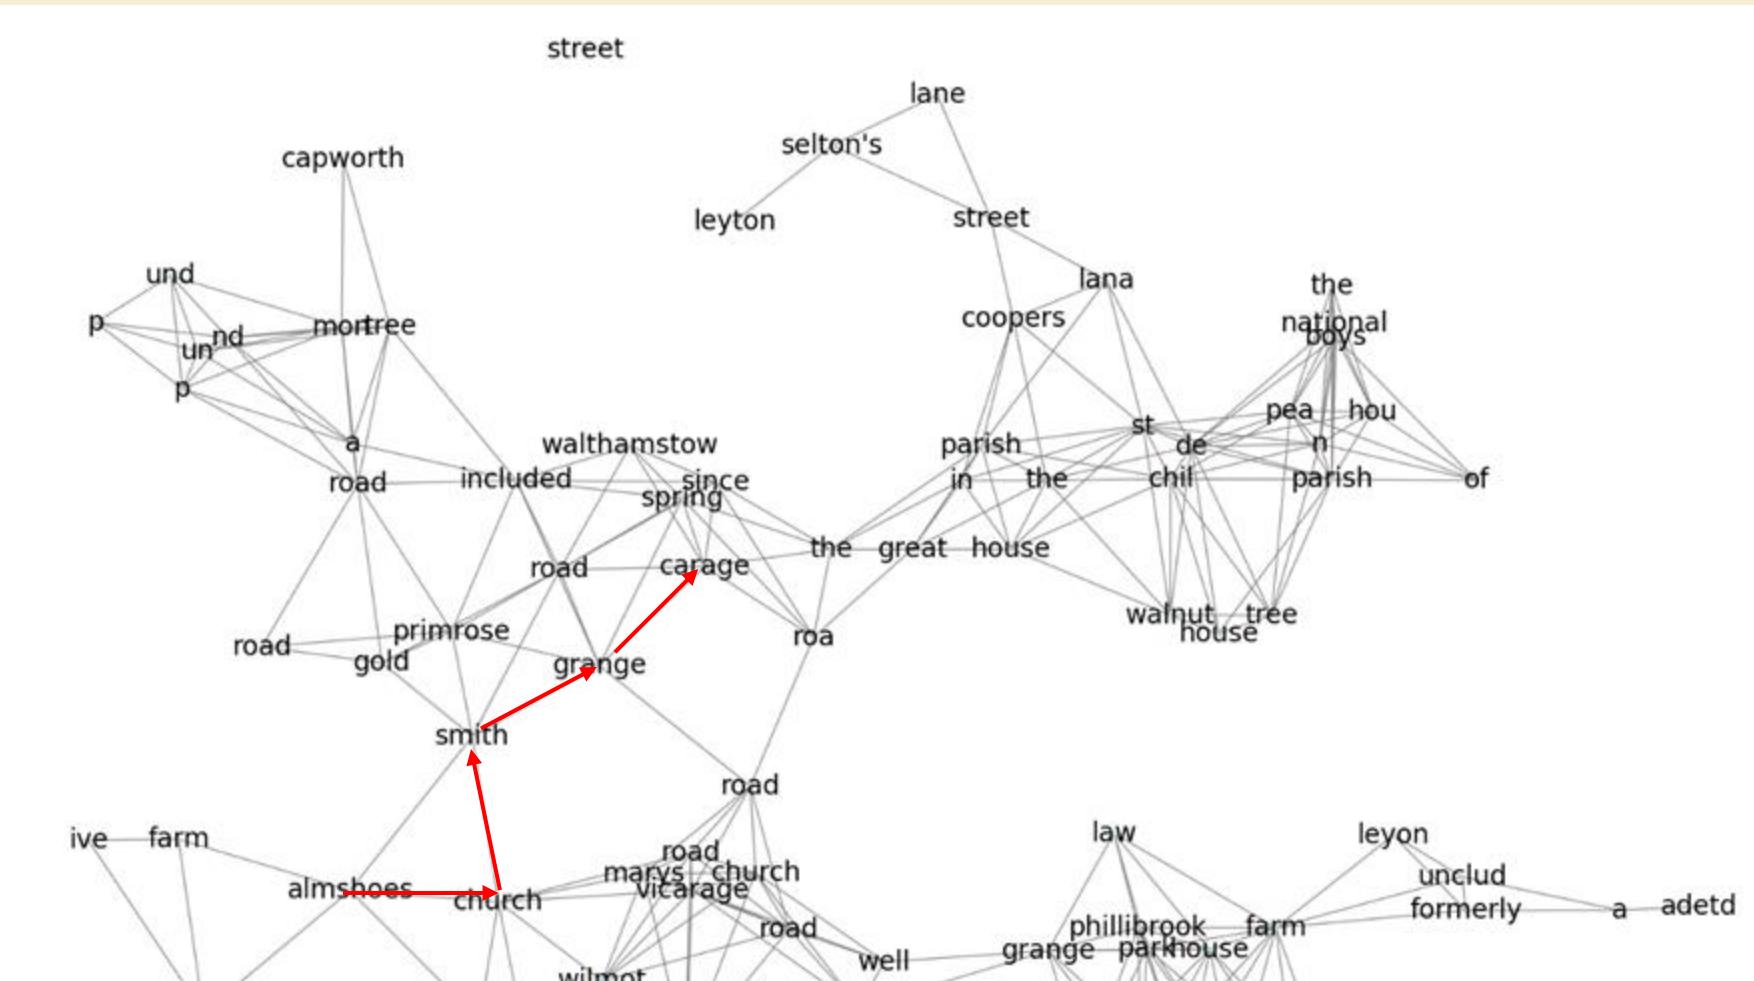

AS

DATA

# Maps 2 Labels 2 Networks

# Networks 2 Walks

walk: almsho[us]es → smith → orange → [g]arage → ...

# Where Empires End: Tracing the Geography of a “Soaring Spirit” in Poetry

Antonina Martynenko, Artjoms Šeļa and Petr Plecháč

Ústav pro českou literaturu AV ČR  
Institute of Czech Literature of the CAS

# From A to B: Soaring view in poetry in six languages

Poet's gaze:

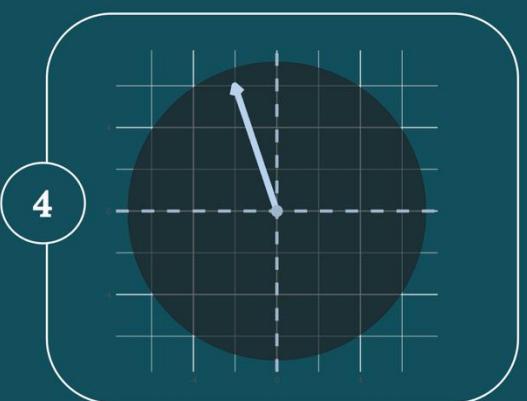

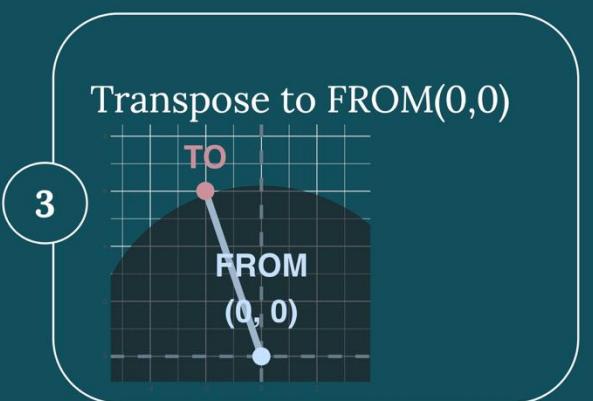

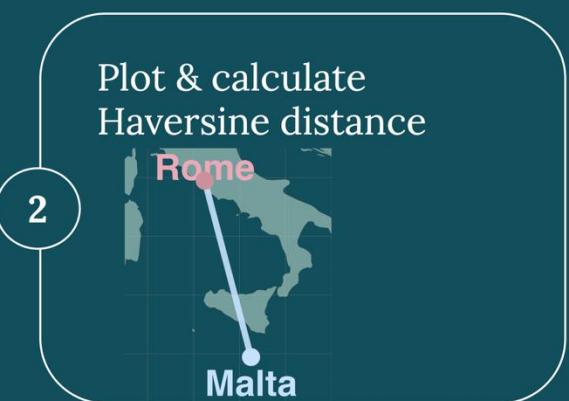

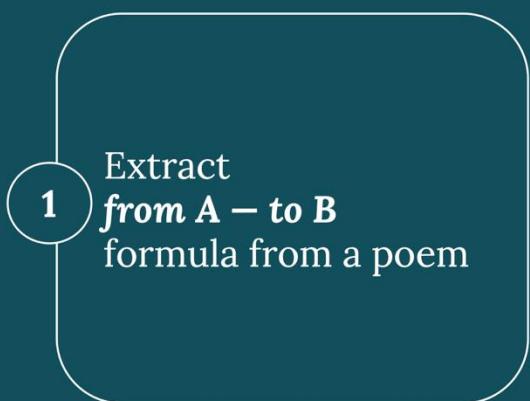

'From Malta's temples to the gates of Rome'

Six European poetic corpora (17-20th c.)  
**Czech, German, English, French, Russian, Slovenian**

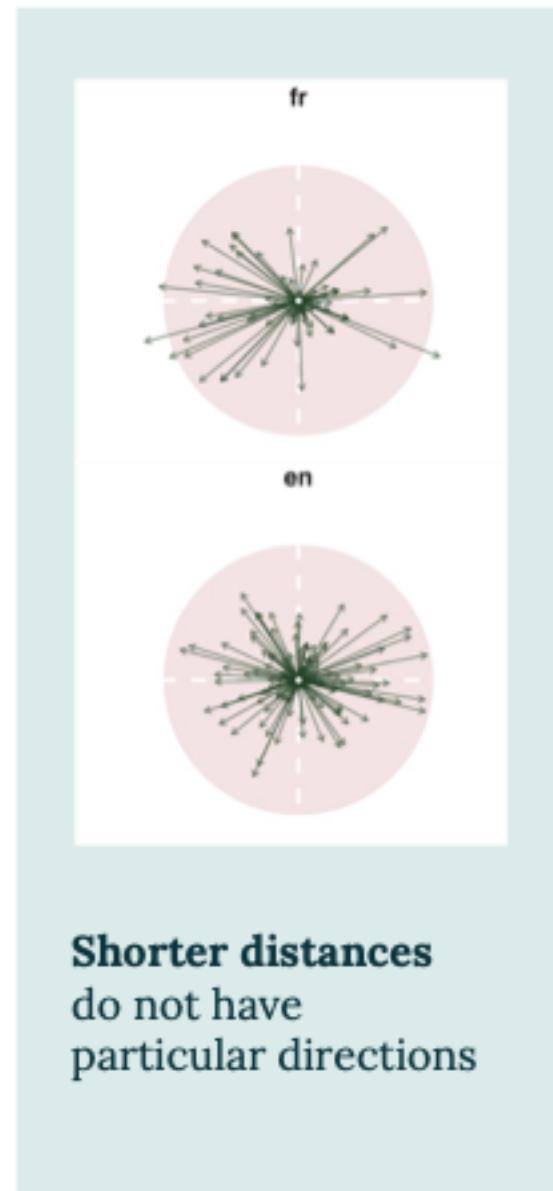

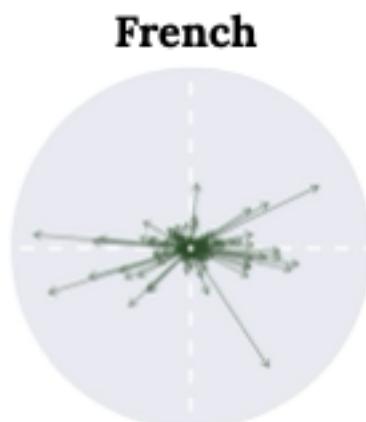

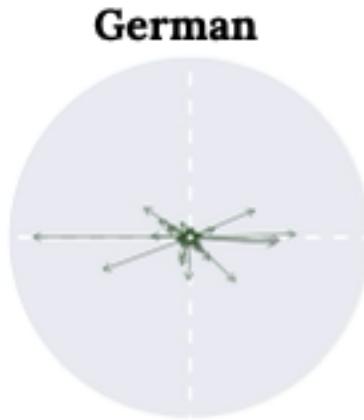

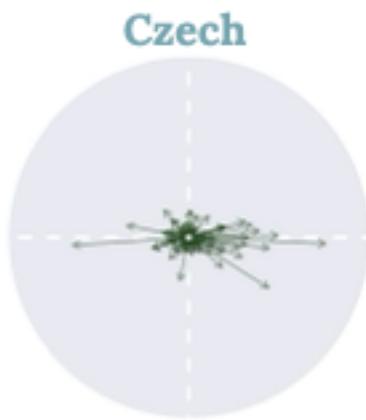

**1086** poetic formulas

## Method

# East <→ West gaze of empire

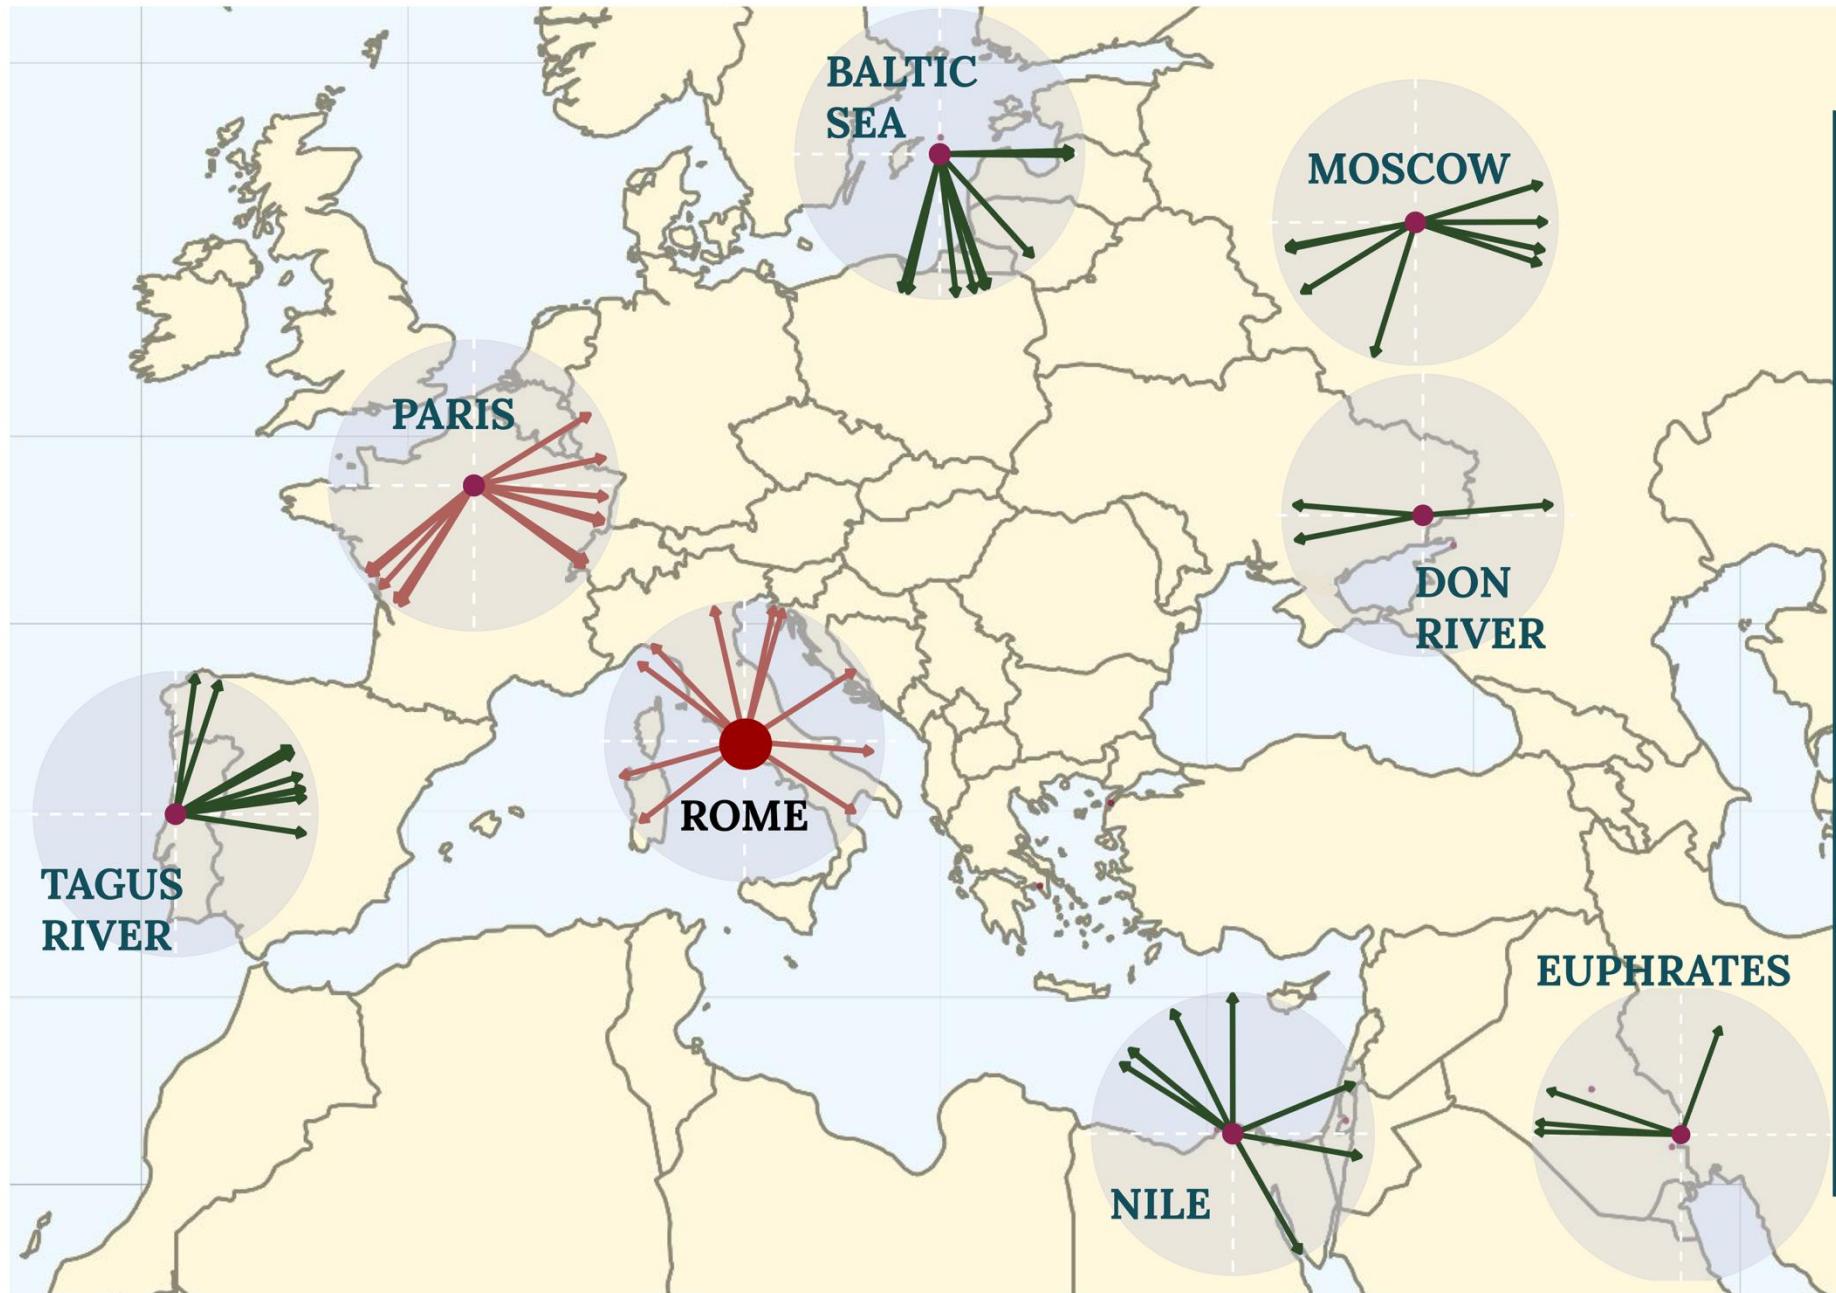

**Longer distances (>1000 km)**

East <→ West direction (except English!)

"Younger" national literatures explore more **local** spaces

**Shorter distances**  
do not have  
particular directions

Shared symbolic  
**borders and centers**  
of European poetry

Locations appeared in  
4, 5, or all 6 corpora and  
their *from* directions  
(normalised distances)

# Rapid Cultural Analytics Using LLMs: A Case of Dreams

Andres Karjus

Tallinn University  
Estonian Business School  
University of Tartu

@andreskarjus on LinkedIn/Bluesky/X

- The Estonian “It’s coming together!” NGO (Hakkab looma) collected dreams and aspirations at various events across the country
- 873 groups of people (~5503 people total; btw Estonia is 1.3M)
- Not very standardized data collection though... lots of text files

**\*\*Ages:** 16 16 17

**\*\*Gender:**\*

Boys: 1 man, 1 man, and another man

Girls: no girls!

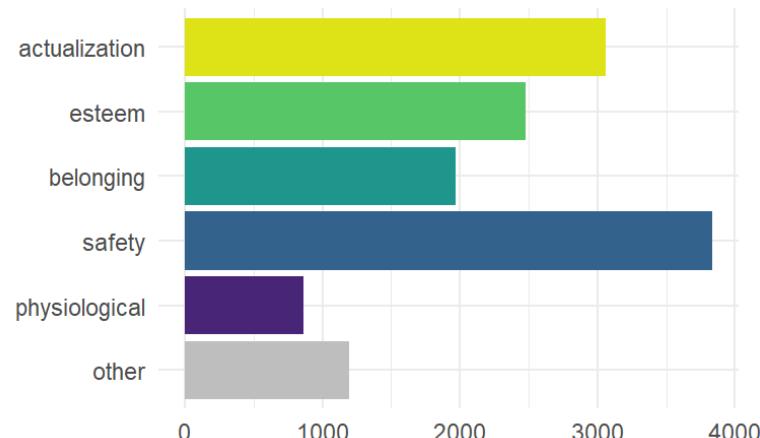

**\*\*Place of residence:** First man – Milky Way, solar system, Earth. Other men: Narva

**\*\*Question 1:\*\*** Answers: Right now I dream of living abroad. As a kid I used to dream of playing video games all day. Dominus hat in roblox. To live in America.

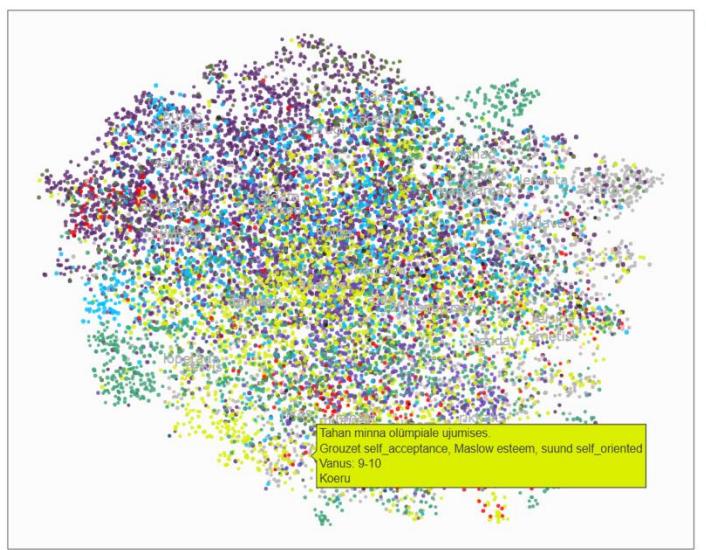

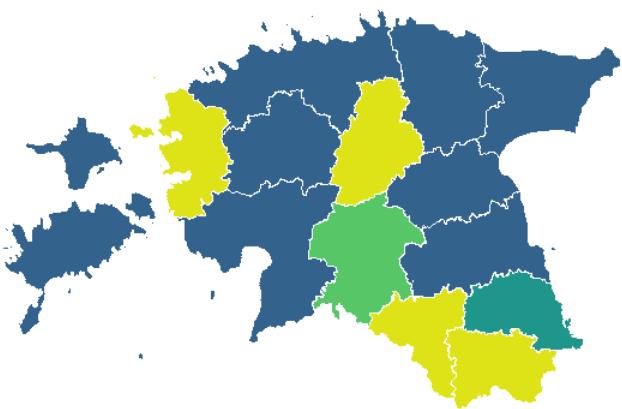

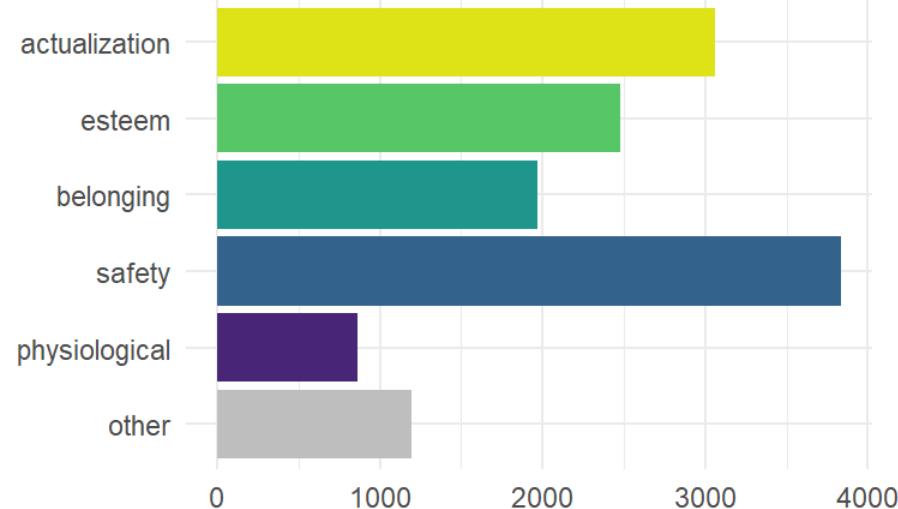

**\*\*Question 2:\*\*** In 2050 there's new tech like super fast cars, and Minecraft is round.

- The Estonian “It’s coming together!” (Hakkab looma) NGO collected dreams and aspirations at various events across the country
- 873 groups of people (~5503 people total; btw Estonia is 1.3M)
- No standardized data collection procedures though, lots of text files

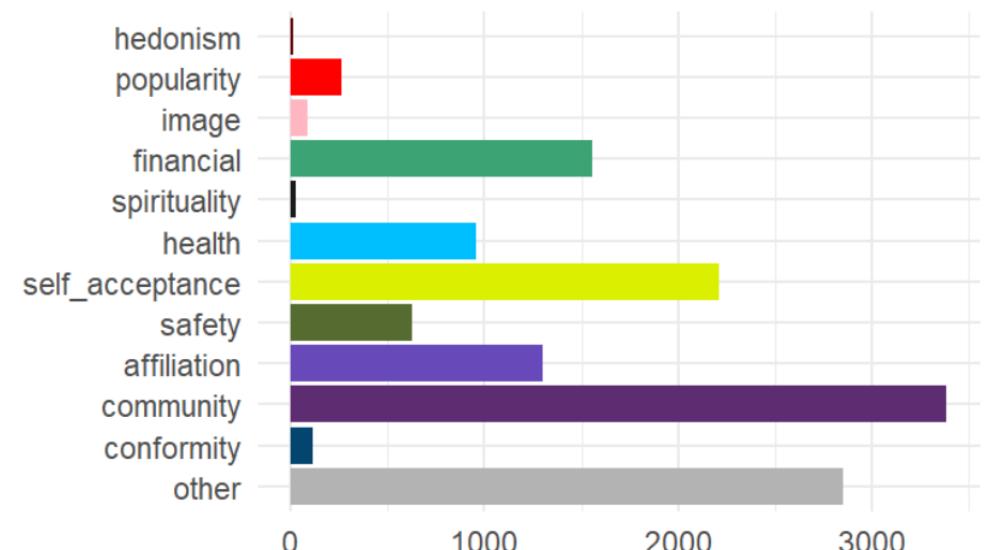

- A little inter-sector collaboration (with Innar Liiv at Taltech)
- Challenge: how to structure and analyze?
- Solution: LLM, structured outputs (GPT-4.1 + Pydantic)
- Parse, unitize and classify - all in one pass
- Result: 13407 dream units (1 to 145 per group)
- Classified into several standard psychological taxonomies + topics

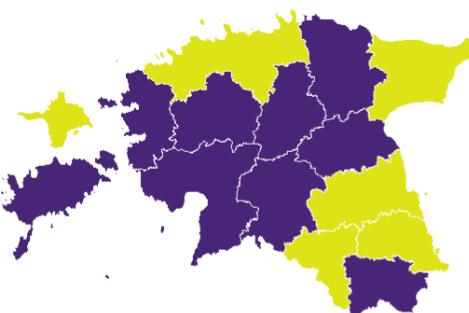

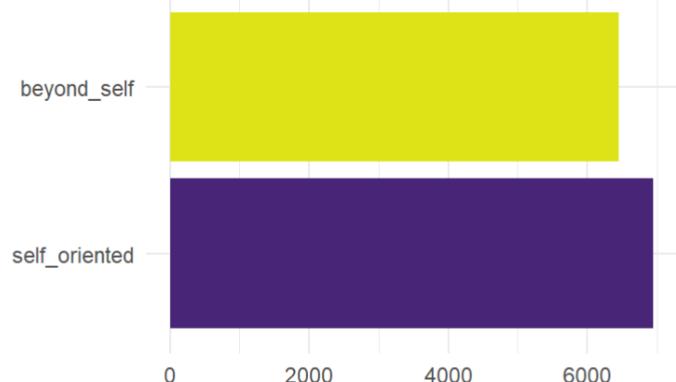

# Maslow's needs:

Grouzet's goals; top: community feeling, to improve the world

Damon's goals:  
self-oriented or beyond self

Also, we're hiring postdocs, ERC level salary, remote possible

# A Diachronic Analysis of Cinematic Trends and Their Reception

Jan Tvrz

# **Quill2Vec: A Tool for Vector Manipulation of Medieval Latin Script**

Mart Herman Gerrit Makkink

- New and innovative pipeline
  - Based on SVGs
  - For palaeography
- Convert individual
  - Characters
  - Pen strokes
  - Part of strokes
- Scalable Vector Graphics (SVG)
  - Mathematically expressed shapes
  - XML-like
- GUI-based
  - No programming required

## WHEN TO USE QUIL2VEC?

# TECHNICAL

- Front end is built in Qt
  - All processes are done through Python
  - CV2 for image preprocessing
  - Potrace for image tracing
